Part Guard Protective Netting

PART GUARD netting is ideal solution for part protection and packaging. The diamond-pattern netting is made of polyethylene, it is non-corrosive, resistant to most chemicals, and its open mesh design allows for air circulation around items.

Techflex offers Part Guard in 5 versions. Each type has its own range of color-coded sizes to fit multiple diameters.

PART GUARD I

A thin netting with a close mesh design ideal for cushioning small parts.

PART GUARD II

Elastic netting stretches to snugly fit irregularly shaped objects; suitable for protection in medium to heavy abrasion environments.

PART GUARD III

The strongest protective non-elastic netting. A thick (3/32"), rigid mesh to protect parts from heavy abrasion.

PART GUARD IV

A specialty netting ideal for irregularly shaped part and large diameters.

PART GUARD V

A stretchable mesh offering medium protection. Ideal for covering asymmetrical and contoured parts, as well as a wider diameter range with fewer products.

Colors Available:

- Black (BK)
- Green (GN)
- Purple (PP)
- Brown (BR)
- Yellow (YL)
- Blue (BL)
- Red (RD)
- White (WH)
- Orange (OR)
- Natural (NT)
- Gray (GY)
